# NYC Department of Buildings

---

## **Best Practices and Engineering Controls for Public Safety and Mechanics During Elevator/Escalator Repairs in Occupied Buildings**

# Agenda

---

## Public Safety Factors

- Car Control
- Jumper Management
- Caution Tape
- Deep Pit Protection
- Barricades

## Mechanic Safety Practices

- Access/Egress MR
- LOTO/Electrical Safety
- Jumpers
- Mechanical Safety
- Hoistway Access Procedure
- Fall Protection

Safety Culture, Creation & Maintenance

# Elevators 101

There are 900,000 elevators in the U.S.  
Elevators are statistically the safest way to travel.

Elevators are twenty times safer than escalators.

Each elevator carries 20,000 people/yr

All elevators put together carry the equivalent of the Earth's population every 3 days!

Maximum altitude that one cable hoisted elevator can achieve is 1700 feet.

Close Door button will not make door close faster.

# Elevators 101

---

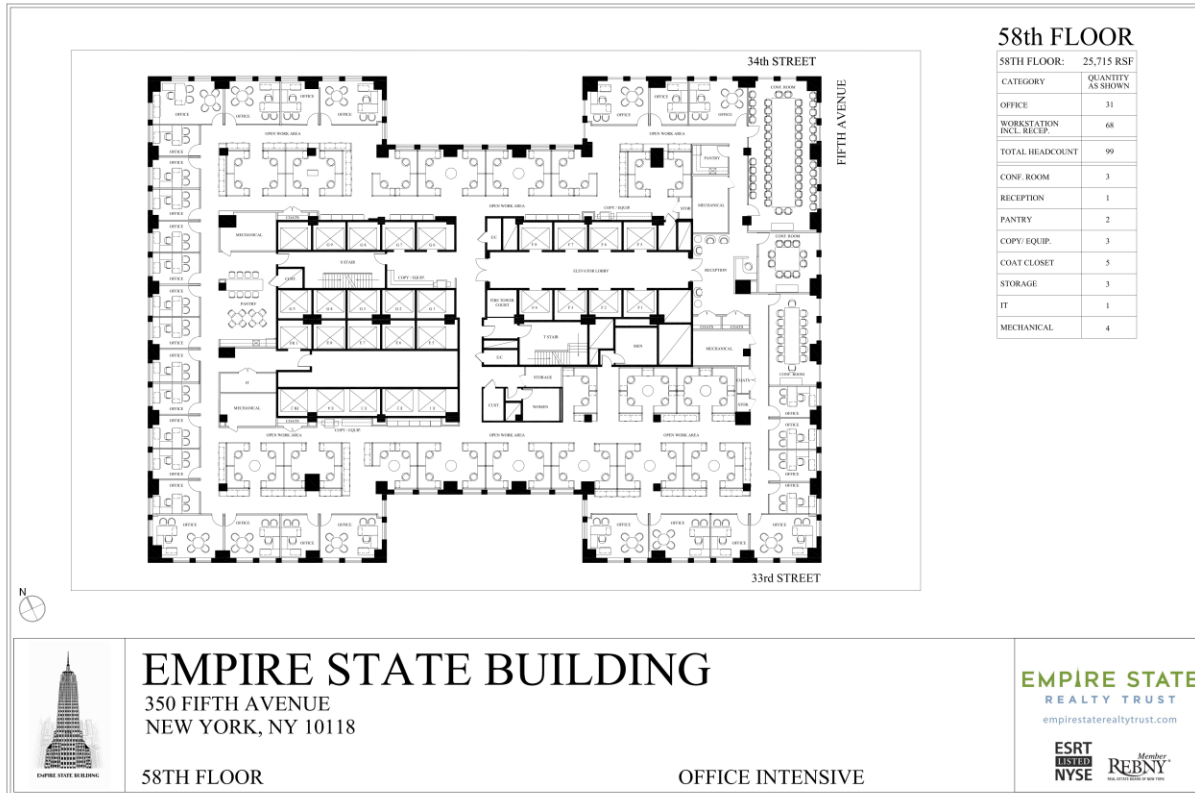

- 1 Steel cables bolted to the the car loop over a **sheave**.
- 2 The sheave's grooves grip the **steel cables**.
- 3 The **electric motor** rotates the sheave, causing the cables to move, too.
- 4 As the cables move, the **car** is lifted.

# Public Safety

2013 BUILD SAFE | LIVE SAFE  
**CONFERENCE**

# Elevator Safety – General Public

---

## CAR CONTROL

- Maintained while on “inspection” mode, removing the unit from the bank
- Electrical and mechanical energy is isolated during repair tasks
  - “Safety Chain” includes: door lock, inspection switch, stop switch

De-Energize

Inspection  
Control

# Elevator Safety – General Public

## JUMPER MANAGEMENT

- The controller is programmed to prevent unwanted movement of the car, jumpers defeat these circuits
- Robust management practices must be applied
- Personal accountability for jumpers must start with the Mechanic

Controlled Jumper

Uncontrolled jumper

# Elevator Safety – General Public

---

## Jumper Best Practices

- Jumpers must not be used as a diagnostic tool.
- Temporary bridging devices must never be used to short out hall door contacts.
- Exceptions must have a written JHA approved by supervision.
- Never jump-out door and gate contacts at the same time.
- Ensure that elevator is on inspection prior to placing jumpers on door, gate, or safety circuits.
- When passenger(s) are trapped inside a stalled car, mechanic must never jump car gate and move the car from the machine room unless they have communication either directly with the passenger(s) or with a second mechanic. In these types of situations it is preferable to move the elevator using TOCI.

# Elevator Safety – General Public

---

## CAUTION TAPE (NYC)

- The code specifies 3” yellow caution safety tape installed at 18” and 54” on the inside car door threshold when working on the elevator
- The tape needs to be utilized when the elevator is removed from normal service and a Mechanic is not working in front of the entrance of the actual device
- Prevents unintended public entrance
- Lights out/Doors open communicates that the car is out of service

**CAUTION CAUTION CAUTION**

# Elevator Safety – General Public

## DEEP PIT PROTECTION

- Pits designed with bottom landing access points represent a challenge for public protection
- Falls of any height can cause injury
- Deep pit depths can be as great as 20'
- Substantial barricades offer a higher level of protection and OSHA compliance

Substantial  
Barricade

Standard  
Barricade

# Elevator Safety – Elevator Mechanic Serious Injury Risk Areas

# Elevator Safety – Hazards of the Machine Room

---

Rotation

Rotation

Electrical

# Elevator Safety – Elevator Mechanic

---

## ACCESS/EGRESS MACHINE ROOM

- Presents hazard to the mechanic
- Must commonly access rooftops, staircases and mechanical spaces not designed for public access

# Elevator Safety – Elevator Mechanic

---

## ELECTRICAL HAZARDS

- If electricity is required for the task, the mechanic must work safely around it.
- Increase distance from the hazard
- Temporarily guard the hazard
- Permanently guard the hazard

Temporary  
Electrical  
Guarding

Exposed  
Electrical

# Elevator Safety – Elevator Mechanic

## JUMPER MANAGEMENT

- Jumpers must not be used as a diagnostic tool
- Temporary bridging devices must never be used to short out hall door contacts.
- Exceptions must have a written JHA approved by supervision.
- Never jump-out door and gate contacts at the same time.
- Ensure that elevator is on inspection prior to placing jumpers on door, gate, or safety circuits.

Controlled  
Jumper

Uncontrolled  
Jumpers

# Elevator Safety – Elevator Mechanic

---

## MECHANICAL HAZARDS

- Elevator companies maintain equipment that is owned by another party
- Retrofitting of permanent guards is an owner decision
- Use of temporary guarding is a best practice

Guarded

Not  
Guarded

# Elevator Safety – Elevator Mechanic

---

## HOISTWAY ACCESS

- Serious injuries occur when control of the car is lost
- Specialized tooling and processes to validate the safety circuits is a best practice

Specialized  
Tools

Improvised  
Control

# Elevator Safety – Elevator Mechanic

---

## FALL PROTECTION

- Elevator mechanics can be exposed to great falls
- Guardrails eliminate the hazard

Guardrails

Fall  
Protection

Buildings

# Escalator Safety

2013 BUILD SAFE | LIVE SAFE  
**CONFERENCE**

# Escalator Safety – General Public

---

## BARRICADES

- Separate public from the hazards of fall and electricity

# Escalator Safety – Elevator Mechanic

---

## CONTROL OF ENERGY

- Redundant control of truss (steps removed)
- LOTO/Electrical

# Safety Culture Development

---

## Minimum Operational Requirements

- Comply with Federal, State and City regulations

## Develop a Culture of Safety

- Develop a Safety Management System
- Proactively manage safety through
  - Employee training & communication
  - Proper safety equipment & tools
  - Create an environment where mechanics champion safety
  - Empower mechanics to own safety
  - Support the safest work, not the fastest
  - Vehicle Management/Driver Accountability
  - Invest in the safety program

# Standardize Processes

## When practical, document a standard work process

- Develops efficiencies
- Improves safety for all
- Reduces re-work and unproductive time

PRE-START CHECKLIST	
Job Site Contact	Otis Project Number
Cell Phone	Name & Address
Job Site Phone & Fax	

The following items must be corrected in order to meet regulatory requirements and an efficient installation. Please ensure the Otis Modernization Superintendent is aware of any deficiencies. Any items that are not part of the scope of work must be forwarded to the Owner, Manager or project GC immediately for corrections.

**Pit**

- ☐ Sump Pump and cover installed per local code (If applicable)
- ☐ Pit lighting, per code, is installed and operating
- ☐ Pit ladder installed and located per local code.

**Hoistway**

- ☐ All necessary cutting and patching scheduled and locations approved.
- ☐ Any hoistway work by others scheduled and approved. (If applicable)

# Establish the Rules

**ALWAYS** use fall protection when a fall hazard exists.

**ALWAYS** follow the operation authorized procedures for false cars/running platforms.

**ALWAYS** lock and tag out equipment when power is not required.

**ALWAYS** use certified & inspected hoisting & rigging equipment.

**ALWAYS** establish and maintain control of the unit prior to accessing.

**ALWAYS** follow proper jumper procedures.

# Establish the Rules

**ALWAYS** control live electricity and rotating equipment when working within close proximity.

**NEVER** ride escalator when steps are removed.

**NEVER** ride the car top with the elevator in normal operation.

**ALWAYS** secure the step chain from movement.

**NEVER** work above or below others when working in the hoistway.

**ALWAYS** use barriers and redundant controls (LOTO) when unattended

# Educate Mechanics on the Process

---

Classroom and hands-on training reinforces the learning process

Improves accountability and compliance

Frequent training/communication

Elevator Field Employees' Safety Handbook

Engaged  
Training

Safety  
Handbook

# Job Hazard Analysis (JHA)

An important accident prevention tool used by mechanics is the Job Hazard Analysis Process, or JHA.

This process allows mechanics to analyze each job step, identify hazards they may encounter, and document ways accidents can be prevented by mitigating these hazards. A written JHA should be used at the start of each day, and when starting each new major task.

The image shows two versions of a Job Hazard Analysis (JHA) form. The left form is a 'Service PM and HAZ BORA Quick Check' with checkboxes for various hazards like 'Caught in', 'Struck by', 'Falls', etc. The right form is a 'JOB HAZARD ANALYSIS' form with sections for 'Job Record', 'Special or Primary Hazards', and a table for 'Basic Job Steps' with columns for 'Existing and/or Potential Hazards' and 'Corrective Measures'.

The image shows a photograph of a handwritten Job Hazard Analysis (JHA) form. The form is filled out with handwritten text, including 'PUMP OUT JOB', 'CLEAN UP', 'CHECK FOR HAZARD', 'LIFTING', 'PUMP OUT', 'CHECK FOR HAZARD', 'LIFTING', 'PUMP OUT', 'CHECK FOR HAZARD', 'LIFTING', 'PUMP OUT'. The form is titled 'JOB HAZARD ANALYSIS' and includes a section for 'Job Record' and a table for 'Basic Job Steps'.

# Jobsite Inspections

Although *NEI*® companies continue to drastically reduce the number of injuries, serious injuries still occur.

As a result, some members have developed special observation programs to assess the level of understanding of mechanics of the key hazard areas while performing typical procedures.

This assessment focuses on preventing the leading causes of serious and fatal injuries.

1. **Fall Protection**
2. **Control of the hazardous Energy**
3. **Control of the Elevator**
4. **High Risk Practices**
  - a. **Scaffolding**
  - b. **Running Platforms**
  - c. **Hoisting & Rigging**
  - d. **Jumpers**

# Program Recognition & Enforcement

---

## Mature programs

- Motivate employees to “do the right thing”
- Reinforces compliance to rules
- Formally document history
- Verbal warning to termination options
- Automatic suspensions for violations, even first time
